

MARIOS KALANTZIS

Junior Front-End / Full-Stack Developer

Athens, Greece | marios.kalan@gmail.com | +30 698 148 6105

GitHub: MariosKalantzis | LinkedIn: marios-kalantzis | Portfolio: marioskalantzis.github.io/PortfolioV2

PROFILE

Career changer moving from operations into front-end development. Nine years of end-to-end ownership at a promotional products distributor, covering procurement, order fulfilment and client relations, followed by a Diploma in Software Technology (IEK Delta, 2022–2024) and ongoing structured self-study through The Odin Project. Now building and deploying JavaScript and React projects, and looking for a junior front-end or full-stack role on a data-heavy, interactive product with senior engineers to learn from.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), HTML5, CSS3

Front-end: React (components, props and state, hooks: useState, useEffect, useMemo), responsive layout with Flexbox and CSS Grid, DOM manipulation and event handling, CSS animations

Tools & Workflow: Git, GitHub, VS Code, Vite, Netlify, GitHub Pages, AI-assisted development (Claude, Copilot), WordPress, Elementor, on-page SEO

Currently learning: TypeScript, Node.js and Express, REST APIs, PostgreSQL, Jest, Leaflet

PROJECTS

S & G Consulting: bilingual marketing site for an Athens accounting firm

Next.js 16 (App Router), TypeScript, next-intl, React 19. Deployed to Vercel.

- Bilingual EL/EN routing with next-intl on the App Router; pages kept statically generated (SSG) via setRequestLocale, each locale served with the correct html lang attribute plus canonical and hreflang alternates.
- Security-hardened: enforced Content-Security-Policy (validated report-only before enforcing), HSTS and related response headers; sitemap, robots and JSON-LD structured data for SEO.
- Performance pass: images re-encoded and resized (Open Graph image 1.7 MB to 106 KB) and the Inter font subset to Greek and Latin; accessible markup with keyboard navigation and ARIA states.

Live: sng-consulting-drab.vercel.app | Client project (private repo)

Invoice Generator: React app for building and exporting client invoices

React, JavaScript (ES6+), CSS, Vite. Deployed to Netlify.

- State lifted into a single parent and passed down to six presentational child components as props and callbacks.
- Immutable state updates with map, filter and object spread; subtotal memoised with useMemo so totals recompute only when line items change.
- Side effects in useEffect with cleanup: localStorage persistence, restore on mount, and keyboard shortcuts; every input and control carries an aria-label.

Etch-A-Sketch: browser drawing grid with adjustable resolution

HTML, CSS, JavaScript

- CSS Grid sized at runtime: gridTemplateColumns and Rows set to repeat(n, 1fr) and n×n cells generated, so the grid tears down and rebuilds when the slider changes.
- Drag-to-draw with the Pointer Events API: pointerdown, move, up and cancel with an isDrawing flag and elementFromPoint(), so it works on mouse and touch.
- Event delegation on the container rather than a listener per cell; colour, rainbow and eraser modes driven by one currentMode variable.

Glass Calculator: calculator with a glassmorphism interface

HTML, CSS, JavaScript

- Arithmetic dispatched from an operations lookup object mapping each operator symbol to its own function, instead of a switch statement.
- Keyboard input reuses the click handlers: a keydown listener validates the key, finds the button by its data-value attribute and triggers it, so there is one input path.
- fitText() steps the display font down from 80px toward a 24px floor while the text overflows its container, keeping long results readable.

PROFESSIONAL EXPERIENCE

Néa Apopsi, Athens, Greece

Sole Greek distributor for Next Tröber Europe GmbH & Co. KG; promotional gifts and workwear

WordPress Developer, 2024 – Present

- Own the company's WordPress store end to end: page layouts in Elementor, theme and plugin configuration, product data entry, and repairing breakages after theme and plugin upgrades.
- Integrated the product catalogue via a Swagger/REST API, auto-populating each product with specifications, downloadable PDF datasheets, and wholesale and retail pricing.
- Implemented customer authentication/login so wholesale clients access their own catalogue and pricing.
- Structure product and category pages around what a customer sees first, and maintain on-page SEO. This is the work that moved me from filling a site with content to wanting to build the interface itself.

Operations & E-commerce Coordinator, 2018 – 2024

- Owned order flow from enquiry to delivery: procurement, supplier coordination with the German manufacturer, fulfilment scheduling and after-sales resolution.
- Translated client requirements (specifications, artwork, deadlines) into production-ready briefs, working across warehouse, production and sales.
- Handled escalations and complaints directly with clients, in writing and in person.

Warehouse Manager / Driver, 2015 – 2018

- Stock control, goods-in and order picking for the Athens warehouse; deliveries and customer-site handover across Attica.

EDUCATION & LANGUAGES

Diploma in Software Technology, IEK Delta, Athens, 2022 – 2024

The Odin Project: Full Stack JavaScript path, ongoing, self-directed. Completed: HTML and CSS, Flexbox and Grid, JavaScript ES6+, DOM and events, objects, recursion, Git and deployment; currently working through React.

Greek Lykeio diploma; military service completed. **Languages:** Greek (native), English (C2 Level).
